POST CONSTRUCTION

We also offer post construction cleaning of premises recently built or renovated and in need of cement and mortar stains removal and general freshening up. We can also pressure wash areas of a building site after building work is finished to clean paths, tarmac, parking spaces, pavements and other hard surfaces.

What Is Soft Washing?

It is a revolutionary new way of cleaning developed in the United States and safe for cleaning brick walls, masonry cleaning, concrete cleaning and all other building cleaning.

It was specifically designed as a safe alternative to high pressure power washing that is likely to damage certain external surfaces such as brick and rendered walls and roofs.

Soft washing is the low pressure application of specialist cleaning chemicals specifically designed for cleaning render, bricks, walls, exterior house cleaning and all outdoor areas and building surfaces. All products used are approved by the UK Government Health and Safety Executive.

Contains safe biocidal wash that cleans and sanitizes surfaces killing spores of algae, fungi, moss and other bacteria

Continues killing spores providing long term protection against re-colonisation
Eliminates the risk of damage associated with high powered pressure washing
Safe for people, pets and the environment

BEWARE of contractors using their own mix of industrial strength sodium hypochlorite which is made for things like cleaning swimming pools and farm buildings and not for exterior cleaning purposes. It is an extremely corrosive

CHEWING GUM & GRAFFITI

If you need chewing gum removal services at a competitive rate, then Grit Ninja can offer you that solution.

Unfortunately chewing gum (or bubble gum as it's alternatively known) has a nasty habit of sticking to pretty much any surface if not disposed of properly in a bin.

Grit Ninja have the latest professional equipment and products to be able to remove chewing gum effectively even from well-trodden in gum which has been squashed into the ground or where there is a large amount of car traffic constantly embedding the chewing gum further.

Our gum removal service can remove old bubble gum from pretty much any surface making the area treated look much more appealing once again.

Grit Ninja have great expertise in graffiti cleaning, with many projects completed. You do not need us to tell you that graffiti can really blight exterior walls and surfaces, and damage the perception of any property affected.

Graffiti can also be extremely difficult to remove, and sometimes repainting a property is just not an option, due to time, expense, or the graffiti being on an unpainted surface (like brickwork).

High pressure washing can remove graffiti in some instances, but the pressures needed to aggressively blast away spray paints are quite considerable. The amount of water and energy used when cleaning graffiti by pressure washing is also notable.

All of which means the chances of damaging masonry, glass, and nearby vegetation during pressure washing are high. High pressure washing is more expensive than soft-washing too, and they're not recommended for any form of masonry.

Sometimes it will be quicker and easier to simply paint over the graffiti- and we are happy to do that for you too.

FORECOURT CLEANING

We provide specialist petrol station forecourt cleaning and provides such services for many of the leading petrol retail companies including BP, Shell and ASDA. Our state of the art equipment will easily remove year's worth of accumulated oil and grime, not to mention customers carelessly discarded chewing gum which showcases a professional image to your clients.

Cleaning is the simplest and least costly method of improving the image of your site and an important health and safety investment. Offering Nationwide coverage with S.P.A. qualified technicians.

Sign written vehicles are custom designed with bespoke power washing equipment. Cleaning programmes can be tailor made to client specification or chosen from our recommended packages.

Having your forecourt cleansed as part of regular maintenance schedule will improve its appearance, but we also understand that it's important for your forecourt to comply with current environmental standards.

We therefore work to Pollution Prevention Guidelines. A pollution incident such as a spill on your forecourt can not only harm the environment but can result in fines and bad press; we reduce this risk by effectively maintaining your drainage equipment to minimise overflows, blockages and spills.

Should an incident occur, our team are on hand to assist you at all times, day and night. In addition, our operatives are trained to work to the most stringent health and safety standards.
